SUMMARY

Full-Stack Developer and AI Integrator with a Bachelor's degree in Computer Science. Specializes in bridging robust backend architectures with Artificial Intelligence, including LLMs (Google Gemini, OpenAI) and Machine Learning algorithms (YOLOv8, Isolation Forest). Proven track record in developing smart, cross-platform applications and engineering AI-driven workflows to automate processes, generate insights, and enhance system capabilities.

EDUCATION

University of Caloocan City | Caloocan City | Bachelor of Science in Computer Science | 2026

- **Relevant Coursework:** Generative AI, API Development, Cybersecurity, Full-Stack, Laravel,

TECHNICAL SKILLS

- **AI & Machine Learning:** Prompt Engineering, LLM Integration (Google Gemini, OpenAI, Groq), Computer Vision (YOLOv8), Anomaly Detection (Isolation Forest).
- **Programming Languages:** TypeScript, JavaScript (ES6+), C#, Dart, Java, PHP, C++, GDScript.
- **Frameworks & Web:** Laravel, React, Expo, HTML/CSS.
- **Tools & Architecture:** API Development & Integration, Postman, RESTful APIs, Database Management.

PROFESSIONAL EXPERIENCE

UrbanWatch | Full-Stack Developer | Sep 2025 – Mar 2026

- Engineered the backend API architecture for a cross-platform Expo mobile application, ensuring seamless data synchronization between the server and the user interface.
- Incorporated the **Google Gemini API** to automatically transcribe, summarize, and generate structured contextual reports based on user-submitted community data.
- Implemented an **Isolation Forest** machine learning algorithm to detect reporting anomalies, maintaining system integrity by filtering irregular or fraudulent data points.
- Collaborated with AI teams to deploy and integrate **YOLOv8** computer vision models, enabling real-time object detection data processing within the backend.

Mines and Geosciences Bureau (MGB) | Developer Intern | May 2025 – Nov 2025

- Built a role-based Document and Information Management System utilizing vanilla PHP and JavaScript to secure bureau file storage and access.
- Enhanced an automated Attendance/DTR system featuring QR code scanning and camera-based identity verification to optimize employee tracking.
- Created an Automated Certification Issuance and Verification System utilizing unique identifiers to mitigate fraudulent documents.

Chix Mo Unli | Full Stack Developer | Sep 2024 – Dec 2024

- Streamlined restaurant operations by engineering a comprehensive multi-platform management system using Dart and Flutter.
- Planned a secure role-based access control system and blended financial modules with Firebase to protect sensitive financial data.

TECHNICAL PROJECTS

ApliAI - AI-Powered ATS Simulator, *Lead Developer*

- Developed an AI-powered Applicant Tracking System (ATS) to automate resume semantic analysis and candidate matching.
- Leveraged advanced **Prompt Engineering** techniques and integrated multiple LLM APIs (**Google Gemini, OpenAI, Groq**) within a Laravel backend.
- Created a dynamic runtime selection feature and rate-limiting protocols to ensure fail-safe AI responses and high system availability.

ROLE-SPECIFIC POS SYSTEM (Orderly Bites) | Java, JavaFX

- Developed a robust POS system for fast-food businesses featuring role-based access, order management, and comprehensive analytics.
- Implemented secure login with PIN and admin override, customizable menu options, and order status tracking with a kitchen display.
- Integrated inventory management, employee records (CRUD), and discount coupon management to optimize business operations.

CODESTACLE | Godot Engine, GDScript

- Enhanced user learning of programming logic by developing an educational 2D platformer utilizing Godot Engine and GDScript.

IOT-SMARTGLOW-LAMP | React, ESP32, HTTP, JSON

- Enabled real-time hardware control by developing a responsive React interface integrated with an ESP32 microcontroller via HTTP and JSON.
