SUMMARY

Full-Stack Developer and AI Integrator with a Bachelor's degree in Computer Science and 4+ production projects. Specializes in bridging robust backend architectures with Artificial Intelligence, including LLMs (Google Gemini, OpenAI) and Machine Learning algorithms (YOLOv8, Isolation Forest). Proven track record in developing smart, cross-platform applications and engineering AI-driven workflows to automate processes, generate actionable insights, and deliver production-ready software.

TECHNICAL SKILLS

AI & Machine Learning: Prompt Engineering, LLM Integration (Google Gemini, OpenAI, Groq), Computer Vision (YOLOv8), Anomaly Detection (Isolation Forest).

Programming Languages: TypeScript, JavaScript (ES6+), PHP, C#, Dart, Java, C++, GDScript.

Frameworks & Libraries: Laravel, React, React Native / Expo, Flutter, HTML/CSS, JavaFX.

Databases: MySQL, Firebase Realtime Database, SQLite.

Tools & Platforms: Git, GitHub, Postman, RESTful APIs, Docker, Render, Netlify, VS Code.

Methodologies: Agile Development, API-First Architecture, Version Control, Unit Testing.

PROFESSIONAL EXPERIENCE

UrbanWatch — Full-Stack Developer

Sep 2025 – Mar 2026

- Engineered a backend API architecture with 15+ RESTful endpoints for a cross-platform Expo mobile application, ensuring seamless real-time data synchronization between the server and 200+ beta users.
- Integrated the Google Gemini API to automatically transcribe, summarize, and generate structured contextual reports from user-submitted community data, reducing manual review time by an estimated 60%.
- Implemented an Isolation Forest machine learning algorithm to detect reporting anomalies across 1,000+ data points, maintaining system integrity by filtering irregular or fraudulent submissions.
- Collaborated with a 3-member AI team to deploy and integrate YOLOv8 computer vision models, enabling real-time object detection and automated data processing within the Laravel backend.

Mines and Geosciences Bureau (MGB) — Developer Intern

May 2025 – Nov 2025

- Built a role-based Document and Information Management System using vanilla PHP and JavaScript, securing storage and access control for 1,000+ bureau documents across 5 access tiers.
- Enhanced an automated Attendance/DTR system featuring QR code scanning and camera-based identity verification, improving tracking accuracy for 50+ employees.
- Created an Automated Certification Issuance and Verification System utilizing unique identifiers, reducing document fraud risk and cutting manual issuance time by ~40%.

Chix Mo Unli — Full-Stack Developer

Sep 2024 – Dec 2024

- Streamlined restaurant operations by engineering a comprehensive multi-platform management system using Dart and Flutter, reducing order processing time by an estimated 40%.

- Designed and implemented a secure role-based access control system and integrated financial modules with Firebase, ensuring encrypted handling of sensitive business data.

TECHNICAL PROJECTS

ApliAI — AI-Powered ATS Simulator / *Laravel, React, Gemini, OpenAI, Groq*

- Developed an AI-powered Applicant Tracking System to automate resume semantic analysis and candidate-job matching, processing 100+ resumes during testing with 95% parser accuracy.
- Leveraged advanced Prompt Engineering techniques and integrated 3 LLM APIs (Google Gemini, OpenAI, Groq) within a Laravel backend with dynamic runtime provider selection.
- Engineered rate-limiting protocols and fail-safe response handling to ensure high system availability and consistent AI-generated evaluations.

Orderly Bites — Role-Specific POS System / *Java, JavaFX*

- Developed a robust POS system for fast-food businesses featuring role-based access control, real-time order management, kitchen display integration, and comprehensive sales analytics.
- Implemented secure PIN-based login with admin override, customizable menu configuration, inventory management, employee CRUD operations, and discount coupon workflows.

CODESTACLE — Educational Coding Game / *Godot Engine, GDScript*

- Designed and developed a 2D educational platformer to teach programming logic through interactive gameplay, using Godot Engine and GDScript with custom level progression systems.

IoT SmartGlow Lamp / *React, ESP32, HTTP, JSON*

- Enabled real-time IoT hardware control by building a responsive React web interface integrated with an ESP32 microcontroller via HTTP and JSON, supporting color selection and scheduling features.

EDUCATION

University of Caloocan City — Caloocan City

2022 – 2026

Bachelor of Science in Computer Science

- Capstone Project: UrbanWatch — AI-powered community monitoring and anomaly detection platform.
- Relevant Coursework: Data Structures & Algorithms, Software Engineering, Database Systems, Generative AI, API Development, Cybersecurity, Full-Stack Development.
